

CSS.

Stands for cascading style sheets.

It is a style sheet language used to control the presentation and appearance of HTML elements.

Why we use CSS?

Its used to style and design webpages.

It control colors, fonts, layouts, spacing positioning, responsive design and other visual aspects.

CSS has Three types.

Inline css

Internal css

External css

Preferred for large projects with css.

External CSS is generally preferred, because it is reusable maintainable, and keeps styling separate from HTML structure.

Cascading means in CSS.

When multiple CSS rules apply to the same HTML element, CSS decides which rule should be applied based on priority, specificity and ^{source} order.
